TegoXM high memory RFID solutions for long-term asset maintenance

Published: 30/04/2009 103 views

TEGO has released its TegoXM high memory RFID tag solution suited for long-term [asset management](#) and maintenance applications.

According to [Tego](#), TegoXM high memory RFID tags can be used for configuration, maintenance and sensor integration in a range of industries.

The TegoXM RFID Launch Kit includes the 30 TegoTags, TegoView software and an Intermec IP30 [EPC Gen 2](#) handheld RFID reader.

The 30 TegoTags provide up to 32k of secure data, while the TegoView software allows users to initialise tags, and read and display data. [Tego](#) claims the high memory RFID technology is suited for the service, maintenance and asset tracking applications where passive or active RFID solutions are not ideal.

[Tego](#) says its TegoTags can store more than 500 times the amount of data held on common passive tags, without the need for a battery. Standard reader equipment can access the tag data, even without network connectivity.

According to [Tego](#), by storing the data directly on the tag as opposed to using a referencing database, users can access maintenance histories, activity information and asset data.

The TegoTags can survive high temperature environments and radiation, and can be used to manage sensors and controls. Data is secured for more than 20 years, making them suited for high-value, long-lived assets.
